John Filhmar Ola

Software Engineer, Full-Stack
Dasmarinas, Cavite, Philippines | +63 977 735 3309 | olajohnfilhmar@gmail.com
filhmar.online | github.com/JohnFilhmar | linkedin.com/in/john-filhmar-ola-631a15344

PROFESSIONAL SUMMARY

Full-stack engineer working daily in TypeScript across React front ends and Node.js services, with production experience in microservices, event-driven messaging over AMQP, WebSocket real-time delivery and both SQL and NoSQL data stores. Promoted from Developer to Lead IT within the first year, owning delivery from requirements through testing, containerized deployment and production incident response. TESDA Java NC III certified, graduating top of cohort, with a working grasp of OOP and SOLID principles built without relying on AI assistance. Delivering client systems independently since 2023.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C#, Python, Go, SQL, PHP, C++, Bash

Front End: React, Next.js, HTML5, CSS3, Tailwind CSS, TanStack Query (React Query), Zustand, Responsive and Cross-Browser UI, Progressive Web Apps

Back End and APIs: Node.js, NestJS, Express, Django, REST APIs, WebSockets, Socket.IO, gRPC, Microservices, JWT and Session Authentication, Rate Limiting

Event-Driven and Messaging: RabbitMQ (AMQP), Publish and Subscribe Patterns, Redis Pub/Sub, Message Queues, Background Job Processing, Low-Latency Real-Time Delivery

Databases: PostgreSQL, MySQL (SQL), MongoDB, Redis (NoSQL), Prisma, Schema Design, Migrations, Query Optimization, Caching Strategies

Engineering Principles: Object-Oriented Programming, SOLID Principles, Software Design Patterns, Layered and Hexagonal Architecture, Code Review, Refactoring

Testing and Quality: Unit, Integration and End-to-End Testing, Jest, Playwright, JUnit, Load Testing, Test-Gated Deployment

DevOps and Cloud: Docker, Docker Compose, Containerization, GitHub Actions, CI/CD, Continuous Delivery, Linux Shell, nginx, S3-Compatible Object Storage (MinIO), Prometheus, Grafana

Tooling and Delivery: Git, Agile and Scrum, Story-Point Estimation, JIRA-Style Issue Tracking, Technical Documentation, Full Software Development Lifecycle

Collaboration and Communication: Cross-functional collaboration, requirement gathering with stakeholders, code review, mentoring, async and remote communication, out-of-hours production support, constructive challenge and clarification of ambiguity

PROFESSIONAL EXPERIENCE

Lead IT Systems Developer, promoted from Systems Developer
YouCode Technologies Corporation, Philippines | July 2025 - Present

- Promoted from Developer to Lead IT within the first year, owning multiple commercial production systems end to end across requirements, architecture, development, automated testing, CI/CD and production operations.
- Built distributed backend services in TypeScript communicating over gRPC and RabbitMQ using publish and subscribe patterns, with per-service PostgreSQL and MongoDB ownership, Redis caching and WebSocket real-time delivery fanned out across multiple gateway instances.
- Delivered React and Next.js front ends in TypeScript with TanStack Query, Tailwind CSS and permission-aware interfaces, working from wireframes through to responsive, cross-browser production UI.
- Owned CI/CD and continuous delivery across the product suite, automating build, unit and integration test execution, security scanning, artifact signing and containerized deployment on self-hosted runner infrastructure.
- Support production systems in operation, including server provisioning, container orchestration, monitoring with Prometheus and Grafana, and diagnosing live incidents outside regular hours.
- Delivered six commercial systems, described at product level under confidentiality: an encrypted mobile messaging platform on iOS and Android, a multi-tenant civic services platform live across multiple cities, a per-client HRIS, an access-control and attendance gateway, an offline-first learning platform, and an AI-integrated Kanban workspace.

Frontend and Web Developer Intern
Ynnovision Enterprise Solutions, Cavite, Philippines | February 2025 - May 2025

- Completed a 486-hour development internship building and improving web application features, delivering assigned tasks to deadline with consistent code quality.

YOUCODE PROJECTS

USAPP – A Private End to End Encrypted Messaging Application | SaaS Business Message Delivery
Sole developer Full-Stack and Architect | IOS & Android Available usapp.ph

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

YouGuard Master Bridge Server, On-Site Access Control and Surveillance Gateway
Sole Developer and Architect | Deployed on customer sites

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

PROJECTS

PeraPlano, Automatic Personal Finance Tracker for the Philippines
Sole developer, architect and operator | Android, closed beta on Google Play | 2026 – Present

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

JMS E-Talyer, Multi-Branch Service and Inventory Management Platform
Sole developer, owner and operator | jms-e-talyer.shop | 2024 - Present

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

Genesys, Game-Based Learning Platform for General Biology
Undergraduate thesis, deployed at a public senior high school genesys.filhmar.online | 2025

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

Healthy Gram, Java Desktop Application
Individual project, TESDA Java NC III programme | github.com/JohnFilhmar/Healthy_Gram_Java | 2024

- Architected and built a secure real-time messaging platform from scratch as the sole engineer, spanning the cross-platform mobile app, distributed backend and production operation: end-to-end encryption with client-side key handling so the server relays a payload it cannot read, passwordless one-time-code authentication with individually revocable per-device sessions, a WebSocket delivery layer covering sent, delivered and seen states, typing indicators and presence coordinated through Redis across instances, independently deployable NestJS services behind an API gateway using gRPC for request and response and RabbitMQ for asynchronous fan-out, and a partner integration capability with an organisation-facing API, template approval workflow and audited admin console that turns the platform into a B2B delivery product.

CERTIFICATIONS AND AWARDS

Programming (Java) NC III, TESDA National Certificate
BCRV Tech-Voc, Inc. | Batch 3, 2025

- Graduated Top 1 Awardee of the cohort, also receiving Best in Participation and Best in LMS Submission.
- Selected as Inspirational Speaker for the graduation ceremony on 23 August 2025.
- Certificates available at drive.google.com/file/d/1Ax1i3Fe6RYuwP_DCFN91GCGrDrNfo1zb/view

EDUCATION

Bachelor of Science in Information Technology
Mindoro State University, Philippines | 2021 - 2025

- Graduated. Transferred from AB English, 2019 to 2021.

Languages: English (professional working proficiency), Filipino and Tagalog (native)
